

SE LAB 1 Functional Table

Name : Kushal Jayavarapu

SRN : PES1UG24CS246

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	comments
FR - 001	Functional	The system shall apply a dynamic diagonal overlay watermark to all draft illustrations uploaded by artists before displaying to the client.	High	Pass: Watermarked draft rendered in client portal Fail: Unwatermarked high-res image exposed before final payment.	Required for client side authentication	(given as sample)
FR - 002	Functional	The system should be allowing the client to submit a creative brief containing details such as description, references and sources, budget and deadlines	Medium	Pass : provide the client with all the required fields which are also visible to available artists. Fail : missing any fields in the brief will be	ensures that all brief details are provided so that an artist can work with complete clarity.	

		before artist is assigned		rejected with an error.		
FR - 003	Function al	artist should be allowed to submit watermar ked WIP draft referenci ng to a specific task on reaching a milestone	High	Pass : the draft must apper in client portal for the client to review the work done so far. (with watermar k applied) Fail : draft being accepted without a milestone or without a watermar k WIP tag.	this facilitates a per milestone payment process with watermar king as authentic ation basis.	
FR - 004	Function al	The artist portal must display this correspo nding milestone payments only after	High	Pass : approved milestone payments must reflect in the portal after 60sec of	client is not gonna pay for unsatisfa ctory work and artist will be paid	

		formed understanding between client and artist.		agreement. Fail : reflection of balance changes without client approval	incrementally.	
FR - 005	Functional	system must display high resolution file which is available for download only after complete commission is paid and artist has agreed to deliver.	High	Pass : download option appears only after payment is successful and verified. Fail : the requirements are satisfied but download option is not available.	the final digital art stays hidden from client until payment and delivery conditions are both satisfied.	
NFR - 001	Non - Functional (performance and security)	Final high-resolution asset downloads must generate expiring	High	Pass: Benchmarking tests confirm target latency and	Pass: benchmarking confirms latency/security targets under	(given as sample)

		signed S3 URLs valid for 60 minutes only.		security standards under simulated peak load.	simulated peak load.	
NFR - 002	Non - Functional (reliability)	the system must log every payment on milestone approval and retain it as immutable audit for a minimum of	Medium	Pass : we should be able to query any transactions which should return details such as time stamp. Fail : existence of payments with no corresponding log entries.	in case of dispute or in need of reference , we now have the ability to provide a tamper resistant record which are independent of either client or artist's claims.
